VALVES

AIR-MITE PNEUMATIC VALVES

Air-Mite offers two main types of pneumatic valves: V-Series and Miniature Valves. Our V-Series Valves are available in both 3-way and 4-way configurations for the control of single and double-acting cylinders. These valves are available with a variety of different operators—manual, mechanical, solenoid, or air-piloted. The unique design of our valves allows for custom designs to be easily created to adapt to your special needs. If you don’t see what you need in our catalog, please contact us as we most likely can make something for your application.

Air-Mite’s Miniature valves line of small 3-way poppet and spool valves offer a variety of manual and mechanical operators in a space-saving design.
